

Dermal Fillers

Dermal Fillers a widely used treatment which restores skin volume, giving a smoother and younger look.

Fillers can be used for plumping parts of the face that have lost volume due to the aging process and or skin damage. It can also be used to enhance your lips volume and definition.

Different types of fillers are better suited to different facial areas.

Although facial fillers can be made of different ingredients, they all aim to produce a result that is seen instantly after the procedure. Furthermore, by injecting fillers into specific points on the face you can add volume, to either restore volume lost over time, or to provide a subtle enhancement, leaving you feeling confident.

Wrinkle Relaxing injections

Wrinkle relaxing is an extremely popular method of softening facial expression lines (frown lines and crow's feet).

Botulinum Toxin, commonly known as Botox®, relieves the facial muscles in specific areas of your face, effectively rendering the muscles dormant, and resulting in a smoother, fresher appearance by no longer allowing underlying muscles to tense and crease your skin.

Botox® is a very safe and efficient procedure with no down time and is virtually painless. When safely and properly injected into the muscles of the face, it works by hindering nerve impulses to these muscles and thereby limiting their activity. By relaxing the underlying muscles, the overlying skin is given a smoother appearance.

We are now booking Facial Aesthetic Consultations. Please come in and see us or call us to book and appointment.

Consultation - Free

Wrinkle Relaxing (Botulinum Toxin)

Frown Lines, Forehead, Crow's Feet

One area: £150.00

Two areas: £185.00
